

The Future is Low Carbon.

At First Gen, we're working hard to build a decarbonized Philippines. That's why we've invested millions of dollars to build the state-of-the-art San Gabriel Power Plant.

It runs on clean, low carbon, natural gas that is locally-sourced from the Malampaya field in Palawan. It can provide power continuously and, along with our 97-MW Avion Plant, can quickly ramp up production to meet sudden increases in our daily power needs. It's flexible, clean, and best of all, it's competitive.

Welcome to the low carbon world.
