

## Gold gains on soft inflation print; US CPI data in focus

GOLD PRICES extended gains on Tuesday after US inflation data came in slightly weaker than expected, giving investors faint hope that the Federal Reserve would continue on its rate-easing path this year, sending the dollar lower. Spot gold gained 0.3% to \$2,671.27 per ounce as of 01:50 p.m. ET (1850 GMT). US gold futures settled 0.1% higher at \$2,682.30.

Data showed producer price index (PPI) rose 3.3% on an annual basis in December, versus the 3.4% rise expected by economists polled by Reuters.

“The cooler PPI data stumped the US dollar index and that helped out the precious metals market bulls, as lower inflation means the Fed may be able to lower interest rates sooner,” said Jim Wyckoff, a senior market analyst at Kitco Metals.

The dollar index fell 0.6%, making gold cheaper for overseas buyers.

Investors now await the consumer price index (CPI) on Wednesday to analyze the Fed’s policy path. A Reuters poll forecast an annual rise of 2.9%, versus November’s 2.7%, and a monthly increase of 0.3%.

Traders currently see the Fed delivering 29.4 basis points worth of rate cuts by yearend, data compiled by LSEG shows.

Bullion is considered a hedge against inflation, but higher rates dull the appeal of the non-yielding asset.

US President-elect Donald J. Trump will return to the White House on Jan. 20 and has vowed to impose trade tariffs. Analysts expect these to trigger trade wars and reignite inflation.

Spot silver added 0.8% to \$29.83 per ounce; platinum lost 1.6% to \$938.65; and palladium rose 0.1% to \$939.61. — **Reuters**

# Crude oil prices slide on US gov’t agency energy demand forecast

HOUSTON — Crude oil prices slipped on Tuesday after a US government agency forecast steady US oil demand in 2025 while lifting its forecast for supply.

Declines were limited by new US sanctions on Russian oil exports to India and China.

Brent futures fell \$1.09 or 1.35% to settle at \$79.92 a barrel. US West Texas Intermediate (WTI) crude finished at \$77.49 a barrel, down \$1.32 or 1.67%.

On Monday, prices jumped 2% after the US Treasury department on Friday imposed sanctions on Gazprom Neft and Surgutneftgas as well as 183 vessels that transport oil as part of Russia’s so-called shadow fleet of tankers.

On Tuesday, the US Energy Information Administration (EIA) said the country’s oil demand would remain steady at 20.5 million barrels per day (bpd) in 2025

Source: REUTERS

and 2026, with domestic oil output rising to 13.55 million bpd, an increase from the agency’s previous forecast of 13.52 million bpd for this year.

Phil Flynn, senior analyst with Price Futures Group, said mar-

kets were anticipating the EIA short-term energy outlook to see if a predicted gain in supply would be reversed.

“They’re waiting to see if the glut EIA predicted earlier is still in the forecast,” Mr. Flynn said.

## S&P 500 rises while Nasdaq dips in choppy session

NEW YORK — The S&P 500 edged higher while the Nasdaq dipped after a volatile session on Tuesday as investors gauged inflation data and braced for quarterly earnings reports to justify stock valuations and the strength of the US economy.

Stocks oscillated between gains and losses throughout the day. Equities received an initial lift from a Labor department report that showed the producer price index rose less than expected in December, although the report failed to materially affect expectations about the Federal Reserve’s likely path of monetary policy this year.

Investors awaited Wednesday’s consumer price index reading, which will further shape expectations for inflation and the Fed.

The Dow Jones Industrial Average rose 221.16 points or 0.52% to 42,518.28; the S&P 500 gained 6.69 points or 0.11% to 5,842.91; and the Nasdaq Composite lost 43.71 points or 0.23% to 19,044.39.

The market is pricing in about 29 basis points (bps) in rate cuts from the Fed by the end of 2025, according to LSEG data, with expectations for a cut of at least 25 bps not rising above 50% until the June meeting.

Adding to investor caution, US Treasury yields remained at elevated levels, with the yield on the benchmark 10-year Treasury note at 4.784%, holding near a 14-month high reached on Monday.

Quarterly earnings get under way on Wednesday with results from big banks, which are expected to post stronger profits, fueled by

robust dealmaking and trading. The S&P 500 bank index advanced.

Goldman Sachs shares gained 1.52% ahead of its earnings results scheduled for Wednesday and helped keep the Dow in positive territory.

The benchmark S&P 500 is trading at valuations well above its historical long-term average and a disappointing earnings season could put further gains for equities in jeopardy.

Healthcare was among the worst-performing of the 11 major S&P sectors, down 0.94% as Eli Lilly stumbled 6.59% after it forecast fourth-quarter sales of weight-loss drug Zepbound below estimates.

After rallying following the US election, stocks have

While analysts were still expecting a significant price impact on Russian oil supplies from the fresh sanctions, their effect on the physical market could be less pronounced than what the affected volumes might suggest.

ING analysts estimated the new sanctions had the potential to erase the entire 700,000-bpd surplus they had forecast for this year, but said the real impact could be lower.

“The actual reduction in flows will likely be less, as Russia and buyers find ways around these sanctions,” they said in a note.

Uncertainty about demand from major buyer China could blunt the impact of the tighter supply. China’s crude oil imports fell in 2024 for the first time in two decades outside of the coronavirus pandemic, official data showed on Monday. — **Reuters**

**NPL,**  
from SI/1

Banks’ loan loss reserves edged lower by 0.5% to P485.13 billion in November from P487.52 billion in the previous month but rose by 5.2% from P460.95 billion a year prior.

This brought the loan loss reserve ratio to 3.3% as of end-November from 3.35% at end-October and 3.46% in November 2023.

Lenders’ NPL coverage ratio, which gauges the allowance for potential losses due to bad loans, rose to 93.2% in November from 92.28% in October but was lower than 101.47% a year ago.

“The slight easing of the NPL ratio in November could be attributed to improved loan quality and better debt management by banks,” Reyes Tacandong & Co. Senior Adviser Jonathan L. Ravelas said in a Viber message.

Separate data from the BSP showed outstanding loans of universal and commercial banks rose by 11.1% year on year to P12.68 trillion in November.

This was the fastest loan growth in nearly two years or since the 13.7% logged in December 2022.

“However, the year-on-year increase (in NPL ratio) suggests that economic challenges and higher interest rates might have impacted borrowers’ ability to repay loans,” Mr. Ravelas added.

Leonardo A. Lanzona, an economics professor at the Ateneo de Manila University, said the month-on-month easing of the NPL ratio is “fundamentally a market correction from the exceedingly high NPL rates (in October).”

“Furthermore, the BSP has signaled its easing policy on the interest rate may be tempered as inflationary pressures have gone up,” he said.

BSP Governor Eli M. Remolona, Jr. last week said there is still room to continue easing interest rates, but noted cutting rates by 100 basis points (bps) this year may be a bit “too much.”

The central bank slashed borrowing costs by a total of 75 bps last year, bringing the target reverse repurchase rate to 5.75%.

The Monetary Board is set to have its first rate-setting meeting this year on Feb. 20.

“Also, housing prices have declined, resulting in lower investment in real estate. Because of these, the banks and investors have been more prudent,” Mr. Lanzona added.

Latest BSP data showed the Residential Real Estate Price Index (RREPI) fell by 2.3% year on year in the July-to-September period.

This was also the first time the RREPI posted a decline since the 9.4% drop recorded in the second quarter of 2021. — **Luisa Maria Jacinta C. Jocsosn**

**Natural gas,**  
from SI/1

“Gas is one of the most expensive sources of electricity, as can be seen from the experience of South Asian countries who have chosen it as fuel for power plants,” it said.

“Contrary to the industry’s claim of gas being a transition fuel, this bill ensures lock-in and continued dependence on expensive electricity...”

IBON Foundation Executive Director Jose Enrique “Sonny” A. Africa said the government

should avoid relying solely on foreign firms in developing the natural gas sector.

“Tapping foreign expertise at the start is expected but there should be a plan to gradually develop indigenous Filipino technological capacity,” he said in a Viber message.

“A plan to do so is the best measure for maximum long-term benefit from the exploitation of Philippine natural gas resources.”

**Corruption,**  
from SI/1

“There were like, 30-plus signatures that were needed to do a project. And because of ARTA, we were able to cut that process down,” he added.

He noted that any project that requires LGU involvement typically experiences delays.

**Remittances,**  
from SI/1

Personal remittances likewise expanded by 3% to \$34.61 billion as of end-November from \$33.59 billion a year ago.

Analysts said the recent peso depreciation may have affected cash remittances during the month.

“For the month of November, the US dollar-peso exchange rate mostly ranged at P58-59 levels versus the P56-58 levels in the previous month that somewhat increased the peso equivalent of OFW remittances,” Rizal Commercial Banking Corp. Chief Economist Michael L. Ricafort said.

Mr. Ricafort said this would “reduce the sending of more OFW remittances denominated in US dollars/other foreign currencies to pay for the same amount in pesos.”

The peso closed at P58.62 against the dollar at the end of November, weakening by 52 centavos from its P58.10 finish as of end-October.

The local unit also fell to the record low P59-a-dollar level twice during the month.

“The peso experienced a depreciation, indicating more pesos for the same foreign currency,” Leonardo A. Lanzona, an economics professor at the Ateneo de Manila University, said.

“Remittances are mainly by recipients used to meet their basic needs. The sender may have figured out that they don’t need to send more of their money to meet the needs of their family here,” he added.

Mr. Ricafort also added that the higher cost of living in OFWs’ host countries could have reduced remittances sent home.

For December, Mr. Ricafort said that remittances likely rose amid the holidays.

“OFW remittances could go up in December in view of the expected seasonal surge during the Christmas and New Year holiday season, the biggest spending by households in a typical year,” he said.

The central bank expects cash remittances to grow by 3% in 2024 and 2025.

## NGCP maintains compliance with existing regulations amid regulatory reset delay

Without an approved regulatory reset process, NGCP maintained that it adhered to the regulations in place at the time by requesting an interim revenue scheme from the Energy Regulatory Commission (ERC) to ensure the continuity of its operations.

“Noong panahon po na patuloy ang trabaho ng NGCP bagamat wala kaming regulatory reset process, ang sinundan namin iyong huling approved rules na wala kaming choice kasi hindi naumpisahan ang pagpataw ng bagong rules,” Cynthia Alabanza, NGCP Assistant Vice President and head of the Public Relations Department, told the House Committee on Legislative Franchises.

“Kaay ginamit namin ang dating rules at humingi kami ng interim revenue scheme para patuloy ang trabaho ng NGCP,” she added.

With the regulatory reset process delayed by almost 10 years, Alabanza stressed that NGCP had no other choice but to follow the previous rules to keep its business running.

“Based on the rules in place at that time, may particular rules na pinapayagan ang NGCP na ganon iyong regulatory framework na unti-unti pong sinisingil para hindi mabulunan ang mga consumer,” Alabanza explained.

“Pangalawa po, kada proyekto po namin ay ina-apply namin sa ERC ay kasama po doon ang ganung klaseng framework,” she added.

For its part, the ERC agreed with the NGCP’s position, admitting there was an absence of rules following its failure to approve the 4<sup>th</sup> regulatory reset application in time.

“The regulatory reset rules apply for a particular regulatory period. Paglampas po ng regulatory period na

iyon, mayroon na talagang vacuum in the law,” Dimalanta said.

Based on the original timeline, NGCP’s 4<sup>th</sup> and 5<sup>th</sup> regulatory reset applications should have covered the years 2016 to 2020 and 2021 to 2025, respectively.

The ERC, however, modified the regulatory reset periods to 2016 to 2022 and 2023 to 2027.

While NGCP filed its issues paper to demonstrate its desire for a reset, Dimalanta stressed that “it doesn’t cure the fact that there were no rules at that time.”

“In 2020, NGCP applied for an interim rate. It’s a recognition that there were no valid issued, approved rates from 2016 all the way to 2020, kaya po sila nag-apply ng interim,” Dimalanta explained.

She added that when the ERC issued a decision on the interim maximum allowable revenue (MAR), its temporary nature was explicitly stated, and a full regulatory reset remained necessary to establish the correct rates.

“Kaya po interim lang ang pinasa ng Commission because it’s all subject to a full reset,” she explained.

When asked by Committee Chairperson Gus Tambunting what rules NGCP must follow, Dimalanta admitted that the ERC should have resolved the 4<sup>th</sup> regulatory reset instead of relying on interim arrangements.

“Klaro naman po na dapat naglabas ang ERC noon. I think it was also recognized that the interim that they’ve applied for in 2020 was only an interim arrangement. Hindi siya final rules. It’s all subject to the final action in a reset,” Dimalanta maintained.
